EDUCATION

Indian Institute of Information Technology (IIIT) Pune

2024 – 2028

B.Tech in Computer Science Engineering | CGPA: 7.65 / 10

Relevant Coursework: Data Structures & Algorithms • Object-Oriented Programming • Database Management Systems • Operating Systems • Computer Networks

TECHNICAL SKILLS

Languages: C++, JavaScript (ES6+), SQL

Frontend: React.js, React Router, Context API, HTML5, CSS3, Axios, Responsive Web Design

Backend: Node.js, Express.js, REST API Design, JWT Authentication, bcrypt, Input Validation (Zod), CORS, Middleware, Rate Limiting

Database: PostgreSQL, Database Indexing, Query Optimization, Neon DB, Mongo DB

AI / Integrations: Gemini API, LLM Integration, REST APIs, Multer (File Handling)

Tools & Platforms: Git, GitHub, Postman, VS Code, Render, Vercel, npm, .env Configuration, API Documentation (Swagger basics)

PROJECTS

AI-Powered Resume Analyzer & Interview Preparation Platform | Backend Web Application

Tech Stack: Node.js, Express.js, PostgreSQL, JWT Authentication, bcrypt, Gemini API, Multer, REST APIs, Zod, Input Validation

- **Designed and implemented a scalable RESTful backend API** using Node.js and Express.js with 15+ endpoints covering user authentication, PDF file upload, AI analysis, report persistence, interview session management, and paginated history retrieval.
- **Integrated Google Gemini LLM API** via prompt engineering to deliver section-by-section ATS analysis, skill gap detection, resume improvement suggestions, and role-specific interview question generation from parsed resume content.
- **Architected a normalized PostgreSQL schema** (users, resumes, analysis_reports, interview_sessions) with foreign key constraints, indexed columns on user_id and created_at, and cursor-based pagination on report and interview history endpoints for optimized data retrieval at scale.
- **Enforced backend security best practices** including JWT-based stateless authentication, bcrypt password hashing (10 salt rounds), Zod schema validation on all API inputs, CORS configuration, and rate limiting on authentication routes to prevent brute-force attacks.
- **Built a secure file ingestion pipeline** using Multer with MIME-type validation and file-size limits, persisting structured AI analysis and interview session reports to PostgreSQL, with centralized error-handling middleware and environment-variable-driven configuration following production-readiness standards.

Task Manager Application | Full Stack Web Application

[Live Demo](#) | [GitHub](#)

Tech Stack: React.js, Node.js, Express.js, PostgreSQL, JWT Authentication, bcrypt, Zod, Neon DB, Vercel, Render

- **Developed and deployed a production-ready full-stack task management application** supporting task creation, updating, deletion, priority management (High / Medium / Low), due date tracking, and status filtering — serving **end-to-end CRUD operations** via a RESTful API with 8+ endpoints.
- **Implemented secure JWT-based authentication** with bcrypt password hashing (10 salt rounds), **Zod schema validation** on all API inputs, and rate limiting on login routes to prevent brute-force attacks.
- **Configured centralized error-handling middleware, CORS policies, and environment variable management** (.env / dotenv) following security best practices; added database indexing on user_id for optimized task retrieval.
- **Deployed frontend on Vercel and backend on Render** with environment-specific configuration, achieving **zero-downtime production deployment** and demonstrating end-to-end full-stack ownership.

ACHIEVEMENTS & COMPETITIVE PROGRAMMING

- **Solved 200+ LeetCode problems** across Arrays, Linked Lists, Stacks, Queues, Trees, BSTs, Graphs, Recursion, and Dynamic Programming; active problem-solving profile with consistent weekly submissions.
- **Achieved 2★rating on CodeChef** demonstrating competitive programming ability and algorithmic problem-solving under time constraints.
- **Independently designed, built, and deployed two production-ready full-stack web applications** integrating AI APIs, authentication, and cloud deployment — demonstrating end-to-end software engineering skills.

CERTIFICATIONS

- **Full Stack Web Development** – Udemy (covering React.js, Node.js, Express.js, PostgreSQL, REST API design, and deployment)
